The Porty instruction manual is very vague on USALS and DiSEqC and suggests referring to the motor instructions or consulting an expert. There are no explanations of the menu option functions and the motor instructions do not help with the receiver set up. I have been trying to set up using DiSEqC. I got as far as setting up and scanning Astra 2, Astra 1 and Hotbird then it all went to pot and the dish started going full west every time I found a new signal and came out of the set up menu to do a scan. I tried moving the dish west to where I wish to set the limit and use the limit set option which states disabled and OK briefly when selected but the dish still goes all the way to the end.<http://fluffy-chins.com/images/capresso-113-manual.xml>

- **1.0.**

Secondly, reading these forums, it seems that USALS is the easy option for setting up. Which options do I then select to complete the set up please I then tell the receiver to go to a known Sat such as Hotbird and when the motor stops you should get Hotbird signals, if not turn the motor and dish by hand until you find Hotbird signals then adjust the dish face for max signal. Tighten bolts and check that you can now get the other satellites.If you have done this correctly all the Satellites should be there.Done. I then tell the receiver to go to a known Sat such as Hotbird and when the motor stops you should get Hotbird signals, if not turn the motor and dish by hand until you find Hotbird signals then adjust the dish face for max signal. I was hoping, that someone familiar with this receiver, would be able to hold my hand and tell me how to tell the receiver to go to say Hotbird. If I come out of the set up menus to select a satellite, the dish then proceeds to full west so I am back to the start again. Should I be setting the motor option to USALS or DiSEqC to start with please Thanks for your help. If there are any Porty users out there with motorised dishes, I would still like to hear from them to learn more about the menu functions. All Rights Reserved. Please enter your desired user name, your email address and other required details in the form below. Note that passwords are casesensitive. When you purchase through links on our site, we may earn an affiliate commission. Learn more You can record TV and radio programmes and timeshift using a rearconnected USB storage device. Also unusual at this price is the HDMI port; however, a Scart socket is provided as an analogue alternative. No UHF modulator is fitted. Build and connectivity Also on the rear panel youll find the LNB input and loopthrough output, which are perhaps a little too close together for comfort. An HDMI output theres no upscaling is accompanied by a compositeonly Scart.

The USB port can be used for firmware upgrades as well as recording. The latter sports a vast array of buttons for PVR functionality, channel selection, menu control, teletext, subtitles, radio mode and much more. The receivers internal construction is neat, though it can get quite warm in use. Setup The second option of the main menu covers installation. If youre using the latter, the next menu antenna setup makes provision for USALS or DiSEqC 1.2 configuration, such as limit setting and satellite positions. Fixeddish users, meanwhile, can specify a DiSEqC 1.0 port. Signal strength and quality bars indicate how the currently selected transponder is being received. A 12V switch item is redundant, given that theres no output. Single satellite search does as it says; similarly, the multisatellite search function available to DiSEqC systems will visit several satellites in one go. In both cases either FTA or all channels can be found, which is more useful than it seems because some channels are improperly flagged. Blindscan isnt an option; its possible, though, to select an individual transponder and search that. No control over PIDs or FEC is, alas, offered. The transponder list can be edited or added to; parameters here are restricted to frequency, polarity and symbol rate. Other menu options look after the videooutput settings, parental locks, clock, favourites eight lists and channel management. From here, channels can be deleted, locked, moved and skipped. They can also be sorted alphabetically or according to encryption status, and satellitespecific lists selected. This is just as well because the normal channel list, accessed with the enter button, gives you no such flexibility. At best, multisat viewers can toggle between the current satellite and all channels. Other menus look after recording functions, such as drive formatting and timeshift buffer duration.

Basic use Compensating for the standard channel lists inflexibility is the find button, which homes in on a channel if one or more letters of its name are entered. The basic but serviceable EPG can program the eightevent timer to instigate a USB recording or a simple channel change. Theres also a ninechannel, multipicture thumbnail feature. We also discovered that you can simultaneously watch and record two different channels, although both must be on the same transponder. JPEG or

BMP still images, MPEG video files and MP3 tracks will play too, although other content like DivX is ignored. Performance Pictures via Scart are disappointing. Thanks to the compositeonly connection, theyre somewhat fuzzy and spoilt by more noise than is usual. But audio quality is excellent. Fortunately, HDMI redresses the balance with a noticeably superior performance. Colours and greyscale are true to life and, within the restrictions of SD broadcasting, details are pleasingly resolved. Searches and channelchanging are both speedy, and menus are responsive too. Reception of Hot Bird and both key Astra clusters was reliable, though. We managed to run out of memory during a multisatellite scan. Although this receiver may boast DiSEqC capabilities, chances are that it will be partnered with a fixed dish in a budget setup and so this need not be an issue. Another problem we encountered relates to timed USB recordings. Manually invoked recordings were always successful. Follow TechRadar Reviews on Twitter You will receive a verification email shortly.
